

# How to Build a Stick Easel

## You will need

3 long sticks of roughly the same length and 3 shorter sticks  
string

( If you don't have sticks you can use bamboo canes )

- Using your three long sticks create a tripod shape and fix together using some string. Make sure it is a really secure knot.

- 
- Using one of the shorter sticks attach horizontally on one side of the tripod to make a ledge for your art work to rest on.

If it feels a bit wobbly secure the structure by adding two more sticks securing each side of the tripod.
